

Secure Storage Systems

A storage solution offering the ultimate protection against theft

Tried and tested with over 40,000 commercial installations in 15 years!

Finally an industrial storage solution that offers the ultimate protection against theft.

The Secure Storage System is the most versatile and adaptable storage unit on the market, offering an endless range of applications in both commercial and retail environments.

It was designed to fulfil a need for a secure cabinet within the retail market and has been successfully used by the retail industry to protect expensive stock targeted by criminals. However, its obvious transition to other applications is evident.

In the last 15 years, there has been over 40,000 commercial installations of this unit throughout Australia, New Zealand and the greater Pacific Region.

The success of the Secure Storage System is attributed to its clever design and strength - able to withstand in excess of 500kg of force ensuring full defence against leverage and blunt force attacks, combined with its ability to integrate into any aesthetic setting.

It can be installed as an individual cupboard or standard unit sizes can join together to create any width that is required. The depth and height of the unit can also vary dependent upon the available space without compromising the strength and security of the unit.

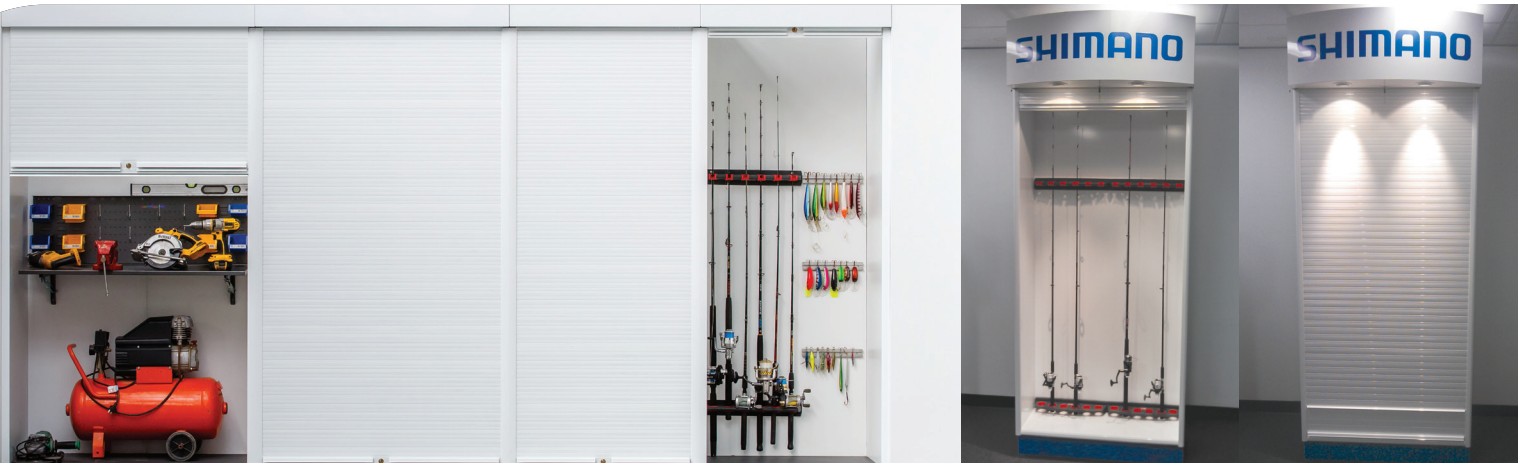

The Secure Storage System can be customised to the client's needs, providing additional order to their secure space - choose from the standard steel industrial system right through to fit-outs that include slat wall, peg boards, adjustable shelving units, pelmets and a range of cabinetry options.

The Secure Storage System is efficient and versatile, able to adapt to numerous spaces and applications:

- ✓ Provide secure storage in undercroft car parks in high-rise apartments for valuables and personal belongings such as bikes, work tools, golf clubs or other expensive sporting goods.
- ✓ Add additional security to existing shelves, spaces and displays in retail environments, providing needed protection for high ticket items susceptible to theft such as jewellery, electronics and liquor.
- ✓ Secure tools at hardware stores and car dealerships or lock up expensive sporting equipment at sporting clubs.
- ✓ Ensure protection against theft of expensive computer systems and musical instruments at schools and educational institutions.

Provide secure storage in undercroft car parks in high-rise apartments for valuables and personal belongings.

Add security to spaces and displays in retail environments

How does it work?

Security and Strength

Able to withstand in excess of 500kg of force without the curtain disconnecting from the tracks.

The Secret to the Secure Storage System is the **Hand-E-Shutter unique patented design** with the interlocking curtain and tracks that locks the unit together. Like armor-plating each section creates flexibility and security for the next.

When pressure is applied to the curtain, the ends tighten within the side tracks, making it more difficult to access. The more pressure applied when trying to force it open, the more secure the unit becomes. This protects the unit against leverage and blunt force attacks.

And when it's time to close up the system, the lock engages locking bars into the metal guides on both sides of the unit and ensures all goods and valuables are protected against theft.

The system also comes with a specially designed heavy duty lock cover for added security.

Sizes: 900 x 2100mm (wxh)
1200 x 2100mm (wxh)

Colours: Pearl White

Closure: Keyed cam lock and heavy duty lock cover
